The content of the book has been updated in October 2022, covering exam v5. The Certified Supply Chain Professional (CSCP) certification is essential for professionals involved in the areas of supplier and customer relations, international trade, the use of information technology to enable the supply chain, and physical logistics. Candidates must pass one exam covering eight modules: 1. Supply Chains Demand Management and Forecasting, 2. Global Supply Chain Networks, 3. Sourcing Products and Services, 4. Internal Operations and Inventory, 5. Forward and Reverse Logistics, 6. Supply Chain Relationships, 7. Supply Chain Risk, and 8. Optimization, Sustainability, and Technology. Officially, CPIM focuses primarily on manufacturing and provides an in-depth view of materials management, master scheduling, production planning, forecasting, and quality improvement within an organization. While CSCP takes a broader view to encompass all steps throughout the supply chain, we create these self-practice exercise questions referencing the concepts and principles currently valid in the exam. Each question comes with an answer and a short explanation which aids you in seeking further study information for the purpose of exam readiness. This product includes questions that have varying numbers of choices; some have 2 while some have 5 or 6. We want to make sure these questions are tough enough to really test your readiness and draw your focus to the weak areas. Think of these as challenges presented to you so to assess your comprehension of the subject matters. The goal is to reinforce learning, to validate successful transference of knowledge, and to identify areas of weakness that require remediation. The questions are not designed to simulate actual exam questions. Realistic or actual questions that are for cheating purposes are not available in any of our products.
