dean pomerleau s trainable road tracker alvinn is arguably the world s most famous neural net application it currently holds the world s record for distance traveled by an autonomous robot without interruption 21 2 miles along a highway in traffic at speeds of up to 55 miles per hour pomerleau s work has received worldwide attention including articles in business week march 2 1992 discover july 1992 and german and japanese science magazines it has been featured in two pbs series the machine that changed the world and by the year 2000 and appeared in news segments on cnn the canadian news and entertainment program live it up and the danish science program chaos what makes alvinn especially appealing is that it does not merely drive it learns to drive by watching a human driver for roughly five minutes the training input to the neural network are a video image of the road ahead and the current position of the steering wheel alvinn has learned to drive on single lane multi lane and unpaved roads it rapidly adapts to other sensors it learned to drive at night using laser reflectance imaging and by using a laser rangefinder it learned to swerve to avoid obstacles and maintain a fixed distance from a row of parked cars it has even learned to drive backwards

intelligent unmanned ground vehicles describes the technology developed and the results obtained by the carnegie mellon robotics institute in the course of the darpa unmanned ground vehicle ugv project the goal of this work was to equip off road vehicles with computer controlled unmanned driving capabilities the book describes contributions in the area of mobility for ugvs including tools for assembling complex autonomous mobility systems on road and off road navigation sensing techniques and route planning algorithms in addition to basic mobility technology the book covers a number of integrated systems demonstrated in the field in realistic scenarios the approaches presented in this book can be applied to a wide range of mobile robotics applications from automated passenger cars to planetary exploration and construction and agricultural machines intelligent unmanned ground vehicles shows the progress that was achieved during this program from brittle specially built robots operating under highly constrained conditions to groups of modified commercial vehicles operating in tough environments one measure of progress is how much of this technology is being used in other

applications for example much of the work in road following architectures and obstacle detection has been the basis for the automated highway systems ahs prototypes currently under development ahs will lead to commercial prototypes within a few years the cross country technology is also being used in the development of planetary rovers with a projected launch date within a few years the architectural tools built under this program have been used in numerous applications from an automated harvester to an autonomous excavator the results reported in this work provide tools for further research development leading to practical reliable and economical mobile robots

a collection of papers dealing with complete systems of intelligent robots focusing on autonomy the contributions cover intelligent perception intelligent planning and control and integrated systems

the striking appearance of luftwaffe s mistel composite attack aircraft might seem ridiculous to modern eyes but employed correctly these original fire and forget weapons were devastatingly effective as allied sources testify this book draws on a wealth of first hand reports and revealing contemporary photographs to tell the full strange story of the mistel units they were the product of a remarkable mix of desperation and innovation and were actually grounded in a pre war non military practise the mounting of one aircraft atop another was initially conceived to extend the ranges of passenger and mail carrying aircraft but as early as 1942 german planners saw the potential for use as a guided missile and by the end of the war the sight of a ju 88 lashed to a bf 109 or fw 190 fighter bearing down on an allied target was not as rare as one might expect this is a comprehensive account of the mistel units from their design and development through the first deployments at d day to the last desperate missions against key bridges on the oder and the neisse in the final weeks of the war

from the author s introduction ancient battles seize the modern imagination far from being forgotten they have become a significant

aspect of popular culture prompting a continuing stream of books feature films television programs and board and computer games there is a certain escapist satisfaction in looking back to an era when conflicts between entire states turned on clear cut pitched battles between formed armies lasting just a few hours and spanning just a few miles of ground these battles were still unspeakably traumatic and grisly affairs for those involved at cannae hannibal s men butchered around two and a half times as many romans out of a much smaller overall population as there were british soldiers killed on the notorious first day of the somme however as with the great clashes of the napoleonic era time has dulled our preoccupation with such awful human consequences and we tend to focus instead on the inspired generalship of commanders like alexander and caesar and on the intriguing tactical interactions of units such as massed pikemen and war elephants within the very different military context of pre gunpowder warfare lost battles takes a new and innovative approach to the battles of antiquity using his experience with conflict simulation philip sabin draws together ancient evidence and modern scholarship to construct a generic grand tactical model of the battles as a whole this model unites a mathematical framework to capture the movement and combat of the opposing armies with human decisions to shape the tactics of the antagonists sabin then develops detailed scenarios for 36 individual battles such as marathon and cannae and uses the comparative structure offered by the generic model to help cast light on which particular interpretations of the ancient sources on issues such as army size fit in best with the general patterns observed elsewhere readers can use the model to experiment for themselves by re fighting engagements of their choice tweaking the scenarios to accord with their own judgment of the evidence trying out different tactics from those used historically and seeing how the battle then plays out lost battles thus offers a unique dynamic insight into ancient warfare combining academic rigor with the interest and accessibility of simulation gaming this book includes access to a downloadable computer simulation where the reader can view the author s simulations as well create their own
